## Assignment 2

**Problem 11.16.3.10 :** A letter is chosen at random from the word 'ASSASSINATION'. Find the probability that letter is

- 1) a vowel
- 2) a consonant

**Answer 11.16.3.10 :**

- 1) a vowel

Number of total letters in the given word is 13. Let  $S$  denote the sample space,

$$\therefore n(S) = 13 \quad (1)$$

Let  $X$  be the event containing vowels. So,

$$X = \{A, A, A, I, I, O\} \quad (2)$$

$$n(X) = 6 \quad (3)$$

Now,

$$\Pr(X) = \frac{n(X)}{n(S)} \quad (4)$$

$$= \frac{6}{13} \quad (5)$$

$\therefore$  The probability that the chosen word is a vowel is  $\frac{6}{13}$ .

- 2) a consonant

Let  $Y$  be the event containing vowels. So,

$$Y = \{S, S, S, S, N, T, N\} \quad (6)$$

$$n(Y) = 6 \quad (7)$$

Now,

$$\Pr(Y) = \frac{n(Y)}{n(S)} \quad (8)$$

$$= \frac{7}{13} \quad (9)$$

$\therefore$  The probability that the chosen word is a consonant is  $\frac{7}{13}$ .
